Pulikunta Anudeep Kumar Reddy

Software Engineer | Python Development | Production Automation | Data Dashboards | AI Integration

Bangalore anudeepreddy453@gmail.com 7995551276 Portfolio Linkdin

SUMMARY

Software Engineer with 3+ years of experience developing Python-based production applications, automation solutions, and data-driven dashboards. Skilled in transforming manual operational processes into automated workflows, building monitoring solutions for production systems, and integrating AI capabilities to improve efficiency and decision-making. Experienced in Python, SQL, Flask/Dash, data processing, API integration, and production support, with a strong focus on reliability, performance, and delivering practical solutions to real-world business problems.

EDUCATION

New Horizon College of Engineering Bachelor of Engineering (B.E) • 8.07 / 10 CGPA

Electronics and Communication Engineering Bengaluru, India • 2019 – 2023

Studied Electronics and Communication Engineering with hands-on exposure to Arduino-based automation, sensors, robotics, VLSI, Python, data structures, and networking. Developed academic projects involving home automation, assistive technology, and electronic systems.

EXPERIENCE

Societe Generale Global Solutions Bengaluru

Software Engineer Aug 2023 – Present

• Developed and maintained Python-based production applications to automate operational workflows, data processing, and repetitive manual tasks.

• Built interactive dashboards using Python, Flask, and Dash to provide real-time visibility into production processes, job execution, logs, and operational metrics.

• Developed data automation solutions using Python and SQL to streamline data extraction, transformation, validation, and reporting, reducing manual effort and improving data accuracy.

• Integrated REST APIs and backend services with dashboards and production workflows to deliver reliable, data-driven applications.

• Implemented production monitoring and log-processing solutions to identify job status, failures, and operational issues, enabling faster troubleshooting and incident resolution.

• Integrated AI capabilities into production tasks to automate analysis and improve operational efficiency, applying intelligent processing to real-world business workflows.

• Optimized application performance through efficient Python code, SQL queries, caching, and automation techniques.

• Collaborated with cross-functional teams to understand business requirements, develop solutions, troubleshoot production issues, and deliver reliable applications.

Turing Remote

AI Trainer & Large Language Model (LLM) Evaluator part-time

AI Trainer & LLM Evaluator working on evaluation of AI coding agents and long-horizon software engineering tasks. Evaluate GLM-5.2 generated solutions against functional requirements through multi-trial testing, regression analysis,

and automated QA. Build localized testing workflows using Python, Cline, VS Code, and Cursor, and validate AI-generated code through smoke testing, security checks, TDD, and CI/CD quality pipelines.

PROJECTS

AI-Powered CVAR Batch Monitoring & Anomaly Detection Platform
Developed an AI-powered production monitoring platform using Python, Flask, and Dash to monitor batch workflows, parse production logs, and provide real-time operational visibility through interactive dashboards. Implemented automated log processing, REST API integration, and performance optimization for efficient data updates and visualization. Extended the platform with machine learning and NLP-based anomaly detection, time-series analysis, and batch ETA prediction to identify abnormal execution patterns and support proactive incident management. Integrated automated alerts and historical trend analysis to improve production monitoring and accelerate issue identification and resolution.

CCR Production Intelligence & Monitoring Dashboard
Developed a centralized production intelligence dashboard to replace fragmented Excel-based tracking across multiple applications and simplify monitoring of production issues. Implemented application-level filters, authentication-based access, automated timing updates, and dynamic generation of graphs and tables, eliminating repetitive manual reporting and rework during month-end, quarter-end, and year-end reviews. Enabled teams to quickly analyze application performance, identify production issues, and present consolidated operational insights to clients. Designed the platform with an AI-ready architecture to leverage historical production data for intelligent recommendations, including identifying areas requiring greater focus and suggesting opportunities to improve operational standards.

Data Processing & Reporting System
Developed a data processing workflow using Python, SQL, and PySpark to extract, transform, and prepare multi-source enterprise datasets for downstream analytics and reporting. Focused on reliable data processing, transformation, and creation of analytics-ready datasets.

SKILLS

- **Python, Flask, Pandas, FastAPI, PySpark**
- **HTML & CSS**
- **Linux/Unix**
- **AI/ML**
- **SQL**
